AGRICULTURAL ECONOMICS
STAFF PAPER

**Undergraduate Education in
Agricultural Economics at
Cornell University**

Challenges and Lessons

February 1988

No. 88-5

Department of Agricultural Economics
Cornell University Agricultural Experiment Station
New York State College of Agriculture and Life Sciences
A Statutory College of the State University
Cornell University, Ithaca, New York, 14853

It is the policy of Cornell University actively to support equality of educational and employment opportunity. No person shall be denied admission to any educational program or activity or be denied employment on the basis of any legally prohibited discrimination involving, but not limited to, such factors as race, color, creed, religion, national or ethnic origin, sex, age or handicap. The University is committed to the maintenance of affirmative action programs which will assure the continuation of such equality of opportunity.

UNDERGRADUATE EDUCATION IN AGRICULTURAL ECONOMICS AT CORNELL UNIVERSITY

Challenges and Lessons

**Edward W. McLaughlin
Department of Agricultural Economics
Cornell University**

This paper was given at the University of Minnesota on January 25, 1988 as a part of the seminar series in the Department of Agricultural Economics. The views expressed in this paper are those of the author and do not reflect official policy of Cornell's Department of Agricultural Economics. Comments on an earlier version of this paper by Jon Conrad, Olan Forker, Harry Kaiser and Deborah Streeter are graciously acknowledged.

Undergraduate Education in Agricultural Economics at Cornell University

Challenges and Lessons

Over the past sixty years undergraduate education in the Department of Agricultural Economics at Cornell University has evolved from a program with its historical roots in the study of farm businesses to today's considerably broader set of programs with emphases in applied economics and business management. This paper presents an overview of these programs and highlights their unique features. First, a brief description of the present program is provided. Second, a series of issues, or challenges, is identified that currently confront the department. Finally, drawing from Cornell's experiences, several observations are made regarding likely opportunities for the undergraduate program at the University of Minnesota.

The Undergraduate Major in Applied Economics and Business Management

The Department of Agricultural Economics at Cornell administers an undergraduate program with one major, "Applied Economics and Business Management." Within this major, six specializations are offered: Agricultural Economics, Business Management and Marketing, Farm Business Management and Finance, Food Industry Management, Public Affairs Management and Resource Economics. Students in all specializations earn a B.S. degree and thus must take 55 credit hours from the College of Agriculture and Life Sciences to meet the distribution requirements set by the college faculty to provide breadth in the biological, physical, and social sciences, in the humanities, and in written and oral expression. Nonetheless, over half of a student's program is devoted to courses in his/her specialization (major) and electives. All of the specializations require several courses in economics, accounting, and applied economics and then, depending on the selected specialization, students select courses to provide depth in their field (see Appendix I for example of course requirements/options for one specialization).

To better understand the current undergraduate environment of the department consider a number of recent trends. First, the Applied Economics and Business Management Program has the largest number of undergraduate majors not only in the College of Agriculture but the entire University (Appendix II). Moreover, continued growth in this program is documented by several key indicators: applications, enrollment, transfers, student credit hours and others (Appendix III). Second, and importantly, although the department now (January 1988) counts 784 undergraduate majors, approximately 700 (89%) are in one specialization, Business Management and Marketing. This is not

to be confused with an agribusiness program -- the majority of courses offered in this curriculum have little or no agricultural content: accounting, business management, business law, finance, marketing principles, marketing management, business policy, small business management and others. The remaining specializations have the following approximate student distribution: Agricultural Economics (30), Farm Business Management and Finance (20), Food Industry Management (35), Public Affairs Management (8), Resource Economics (7). Third, many of our undergraduate courses are exceptionally large: in the past academic year 16 courses had over 100 students, and 6 of these had over 300 students (Appendix IV). This phenomenon has led to a student/course ratio, 131, well over twice the college average. Although the average advising load is also high relative to most institutions, 21.3 students per advisor, recent efforts have been successful in moderating it somewhat (Appendix III).

Past Present and Future Challenges:

The unique characteristics of the undergraduate program at Cornell and the growth it has enjoyed have together led to a number of issues or challenges. At various times the department has attempted to address most of these challenges but with varying degrees of success. The most critical of these are capsuled below.

■ Are we an Agricultural Economics or a Business Program?
 This is not a new debate at Cornell but rather an overarching issue that the faculty has struggled with for years. Further, it defines a set of ancillary issues. Cornell does not have an undergraduate business school, and while other departments do offer selected management courses, our program has become the principal beneficiary of the renewed interest in business education. Within this environment many of our faculty members feel that a shift away from traditional farm management and production economics courses toward applied economics and business displays a sound, market oriented strategy. However, others argue that since all of our faculty (currently) are agricultural economists that we ought to "stick to our knitting" and limit our research and teaching to the discipline where we have a comparative advantage. Furthermore, they point out that student interest in majors tends to be capricious and that the long run demand for business education may not remain strong.

The current department position attempts to reconcile these views: we consider ourselves an applied economics and business program where students may combine basic management and liberal arts courses with, if they desire, agricultural courses to prepare for careers with either a general business or an agribusiness orientation. Appendix V sets forth our position as

a liberal arts and science approach to business education. Our philosophy is that the requisite powers of creative thinking and imagination are found in many places and thus we require that a student be well grounded in a wide distribution of arts and sciences as a basis for the specific subject matters and analytical techniques taught in our department.

■ Large Course Sizes and Staffing: Very large courses place a strain on department resources: facilities, secretarial/administrative support and, especially, teaching faculty. Some express concern that, as a result, research productivity is negatively affected. One partial response has been to hire lecturers to teach several of the largest courses where the faculty has had less training or interest (eg, accounting, business law, etc.). These lecturers have only teaching responsibilities. This strategy has been very effective. The lecturers typically receive among the highest teaching evaluations from students and, they partially relieve the research faculty from an even larger advising burden. Several other of the largest courses, however, are now taught by faculty who, for a variety of reasons, will not be teaching them in another 4-5 years. The majority of the junior faculty are reluctant to take over these time-intensive courses. Yet the department has no contingency plan in place. Recruiting new PhDs with business degrees has received uneven support.

■ Graduate Student Training. The nature of the undergraduate program influences the range of options for graduate students. Many faculty-graduate student research relationships are first established when the student works as a teaching assistant with the faculty member. However, in general, the teaching faculty has found that our own graduate students are either unable or unwilling to serve as TAs for undergraduate courses in business. Consequently, TAs are recruited heavily from the graduate business and law schools and paid on an hourly basis. This arrangement has proved very satisfactory. But the fact remains that undergraduate teachers must find alternatives in order to gain access to and develop working relationships with our own graduate students.

■ Student Quality and Equity. In effect, the department offers six differentiated products (specializations) to six quite different segments of the student population. Each segment is treated differently in the admissions process and receives quite different treatment by advisers. In general this strategy has worked quite well. However, several issues may be raised. Competition to gain acceptance into the "Business Management and Marketing" specialization has become keen over the past six years. Students applying to this specialization are now among the best applicants to the college. These students most often come from urban and suburban areas. On average, students with farm backgrounds do not present academic records of equal caliber. Thus, our faculty has instructed the Admissions Office

to give special consideration to students with farm and food industry interests and experience. Although not yet a major problem, one implication is that agricultural and food industry students, once the mainstay and pride of the department, risk becoming second class citizens.

OPPORTUNITIES FOR UNIVERSITY OF MINNESOTA

As the Department of Agricultural Economics of Minnesota considers its own directions for the future, it may be prudent to reflect on lessons learned from the Cornell experience. If I may, I suggest two:

- Expansion of Applied Economics Focus. As farming and agribusiness have become more completely integrated in the fabric of the overall economy and, reflecting this evolution, the training of agricultural economists has broadened to encompass analytical skills applicable to a wider range of problems, Cornell has found that an applied economic and business management emphasis works. Student interest is strong, student quality is high and faculty training in agricultural economics is appropriate. Our roots in the agricultural and food industries have not been abandoned, our horizons are simply broader. Naturally, the lack of an undergraduate school of business at Cornell makes our reorientation much easier. Nevertheless, it appears that this has the potential to be very fertile ground, especially when considered with my second observation below.
- Food Industry Focus. Cornell has a long standing reputation and close working relationship with the food industry. Indeed, the Food Industry Management specialization is inextricably interwoven with that of Business Management and Marketing. For example, although the official enrollment indicates that only 4 percent of our students are in the food industry specialization, in fact, a large number of our business management and marketing students are attracted to the department because of our applied food industry focus. So the relatively small number of food industry majors belies the actual interest and ultimate career choice. A student interested in working for General Motors is also likely to be interested in General Foods. For that matter, researchable issues may not be terribly different between the two. Nevertheless, as the food manufacturing and distribution industries become more sophisticated, the need for greater education and training of its future managers has intensified. Perhaps the transition from "upstream" agricultural activities to "downstream" food processing and distribution activities is more logical, or less threatening, than other, more dramatic proposals. Moreover, Cornell's experience suggests that the food industry's cooperation on research and its financial support for teaching and scholarships have substantial benefits. The University of Minnesota's prime metropolitan location would appear to reinforce such an initiative.

APPENDIX I

Applied Economics and
Business Management

(Effective August 1987)

Requirements for Specialization in
BUSINESS MANAGEMENT AND MARKETING

This program fulfills the requirements for the B.S. degree while preparing the student for a career in business. All students are expected to complete at least 36 credits of courses (or equivalents) offered in the Department of Agricultural Economics and 39 credits of College Distribution Requirements.

Students transferring into Business Management and Marketing are advised to take biology, chemistry, physics, introductory economics and mathematics before admission. They may need an additional semester to meet requirements for graduation.

I. Required Courses (or Transfer Equivalents)

A. Students must take the following courses offered by the Department of Agricultural Economics.

Ag. Econ. 150	Economics of Agricultural Geography
Ag. Econ. 220	Introduction to Business Management
Ag. Econ. 221	Financial Accounting
Ag. Econ. 240	Marketing
Ag. Econ. 310	Introductory Statistics
Ag. Econ. 320	Business Law
Ag. Econ. 323	Managerial Accounting
Ag. Econ. 324	Financial Management
Ag. Econ. 424 or 441 or 443	Business Policy, or Personal Enterprise and Small Business Management, or Food Industry Management

B. Students must take the following additional offerings.

Com. Arts 201	Oral Communication
*Econ. 101	Introductory Microeconomics
*Econ. 102	Introductory Macroeconomics
Two courses in Mathematics (eg. Educ. 115, Math 107, 111, 112)	
One course in computer programming or computer use	
One course in intermediate economic theory	

* May be credited to College Distribution Requirements.

C. Minimum of two additional courses from the following list of management courses.

Ag. Econ. 302	Farm Business Management
Ag. Econ. 321	Law of Business Associations
Ag. Econ. 322	Taxation in Business and Personal Decision Making
Ag. Econ. 342	Marketing Management
Ag. Econ. 420	Advanced Business Law
Ag. Econ. 424	Business Policy
Ag. Econ. 426	Cooperative Management
Ag. Econ. 441	Personal Enterprise and Small Business Management
Ag. Econ. 443	Food Industry Management
Ag. Econ. 448	Food Merchandising
Ag. Econ. 449	Applications in Strategic Marketing

D. A minimum of two additional courses from the following list of "analytical" courses.

Ag. Econ. 332	Economics of the Public Sector
Ag. Econ. 412	Introduction to Linear Programming
Ag. Econ. 415	Agricultural Prices
Ag. Econ. 416	Introduction to Econometrics
Ag. Econ. 418	Information Systems and Decision Analysis
Ag. Econ. 431	Farm and Food Policies

II. Courses Generally Recommended

Students specializing in Business Management and Marketing are encouraged to take courses in other areas of specialization in the Department of Agricultural Economics, other disciplines of the College of Agriculture and Life Sciences, and other colleges of the University in order to obtain a broad educational experience.

III. Courses Recommended for a "Minor" in Business Management and Marketing

Ag. Econ. 220	Introduction to Business Management
Ag. Econ. 221	Financial Accounting
Ag. Econ. 240	Marketing
Ag. Econ. 320	Business Law
Ag. Econ. 323	Managerial Accounting
Ag. Econ. 324	Financial Management
*Econ. 101	Introductory Microeconomics

* Also satisfies the College Distribution Requirement.

APPENDIX V

The Undergraduate Business Management Program in the Department of Agricultural Economics at Cornell University

Objectives

The primary objective is to provide a basic undergraduate business management program that allows the student to obtain a broad based education that contains both the basic science and arts of a liberal education and the management skills and concepts necessary to successfully enter the job market. By combining basic management courses with others taught within the Department of Agricultural Economics and the rest of the University, students will be able to develop strong programs oriented toward either the general business or the agribusiness sector.

It is not the objective of the Department to offer the full range of courses that are offered at most undergraduate business schools or that might be required for accreditation as an undergraduate business program. It is expected that course offerings, both in and outside of the basic set of courses, will continue to reflect the strong agribusiness expertise and interest of the faculty.

Responsibilities

The Department of Agricultural Economics accepts the responsibility to offer, on a continuing basis, each of the basic Business Management courses. This set of courses is to be limited to the basic building blocks of a management education. The set is not, in and of itself, sufficient for a major. Rather, the Department will offer additional courses that when combined with the basic set of courses, and other courses available within the University, will meet the requirements of the business management and marketing specialization. Courses not in the basic set will find their justification in other instruction objectives of the Department. It is expected that nonbasic courses will change with the skills and interests of the faculty.

The Department will insure staffing of the basic set of courses at the level necessary to provide quality instruction. The source of professorial appointments will continue to be based on the total needs of the Department and the availability of quality personnel.
